CORE SKILLS

Languages & Frameworks

- HTML5
- CSS3
- JavaScript
- Python
- Flask
- C

Tools & Platforms

- Git & GitHub
- Linux
- VS Code
- REST APIs
- Canva

Core Competencies

- Responsive UI
- Full-Stack Dev
- API Integration
- Security Basics

PROFILE

Science student and self-taught web developer with a passion for building clean, responsive, and functional digital products. I turn ideas into working applications using core web technologies, full-stack tools, and API integrations. All projects are open-source and publicly available on GitHub.

PROJECTS

WafyShield Next.js · Security

Serverless web security scanner that audits HTTPS, TLS, security headers, and cookie attributes — delivers a 0–100 risk score with actionable remediation.

[Source](#) [Live Demo](#)

WafyURL Python · Flask

Full-stack link management platform with custom aliases, password protection, QR generation, and real-time click analytics.

[Source](#) [Live Demo](#)

WafyDev HTML · CSS · JS

All-in-one developer toolbox with 9 utilities — password generator, QR generator, typing test, markdown preview, and more. Privacy-first and offline.

OPEN SOURCE & COLLABORATION

All projects are publicly available on GitHub. I believe in open-source and knowledge sharing. Open to internships, freelance work, and collaborations that involve meaningful technical challenges.

INTERESTS & APPROACH

Interests: Full-stack development, cybersecurity, AI, and building tools that solve real problems.

Approach: From simple concepts to working applications, I explore problems, learn what's needed, and build solutions step by step. Every project reflects learning in action.
